Professional background

Frontend-focused Web Developer with 7 years of experience building websites, landing pages, and ecommerce solutions. Strong background in PHP, JavaScript, HTML, and CSS, with extensive experience using WordPress and Elementor to create responsive, high-conversion pages.

Specialized in marketing websites, landing pages, and performance-oriented layouts, working closely with design and marketing teams to deliver clear, scalable, and user-focused solutions.

Comfortable working remotely, asynchronously, and in fast-paced environments, with strong attention to deadlines, communication, and code quality.

Soft skills

- Flexibility
- Team work
- Creativity
- Work ethic
- Critical thoughts
- Adaptability

Experiences

ACT Digital | 2021 - Maio - setembro

Front-end developer

Participation in the Banco Santander's PIX mobile PF project, initially handling support tasks and later working on regulatory compliance according to BACEN (Brazilian Central Bank). I used technologies such as Angular, RxJS, TypeScript, Sass, Jasmine/Karma, GitLab, Gitflow, Jenkins, webview architecture, and agile methodologies.

Santander Tecnologia | 2021 - atual

I started as a third-party contractor through ACT Digital at Santander, but due to my good performance, I became an employee of the bank during the year. From that point on, I began to receive more guidance and started mentoring new juniors. I worked on the migration from Angular 8 to 12 in the PIX projects, participated in regulatory tasks related to daily and nightly limits, beneficiary management, authorized limits, statements, and refunds. Additionally, I provided support for all PIX single-page application projects.

My responsibilities included release monitoring, preparing packages with builds in the Jenkins pipeline, and monitoring during the implementation phase. I was involved in both PIX Mobile and PIX IB projects. I also assisted in the integration of new team members, providing mentoring and training for them.
